

## Commercial Ground Maintenance Solutions

### Protecting your Growing Assets

Professionally maintained grounds will improve the all important first impressions your company makes on every customer and visitor who visits your premises. After all the external appearance of any organisation speaks volumes about the way it operates internally. Attractive surroundings have the power to inspire employees, impress visitors and attract new customers.

Few organisations still maintain and equip their own maintenance teams, recognising instead the financial and practical benefits of using specialist contractors.

Using external contractors is a modern and highly cost effective strategy which brings many benefits. When that contractor has Landscape Design`s proven track record and is committed to meeting your requirements exactly, the result is an effective, professional and dedicated service from a single source.

### The Reliable Name in Grounds Maintenance

Landscape Design`s reputation for quality, reliability and value is a result of many years of experience tending the grounds of a wide range of customers, ranging from single office or factory units to some of the best known multi-site companies in the country.

You can follow their example and rely on Landscape Design to make the most of your surroundings.

# Commercial Ground Maintenance Solutions

## Professional planning the LDC approach:

No matter how large or small your maintenance needs, we begin with identifying your situation and decide a programme based on your requirements, paying particular attention to any specific objectives or needs.

Once a programme is agreed, you can rely on our professional maintenance teams to make regular visits and carry out work to your programme. These are geared to accommodate the changing seasons and meet or exceed LDC's quality assurance standards.

By combining regular supervision of our teams with valuable feedback from yourself we aim to create a genuine working partnership which meets your requirements exactly.

LDC provides grounds maintenance for all forms of grass areas, shrubbery and hard standing. Whether you invest in immaculately presented lawns to attract millions of visitors or have an industrial estate where maintenance is necessary and an expense to the business, LDC provide 'fit for purpose' solutions. We are able to absorb one or multiple sites throughout Scotland and Northern England.

Our experience and expertise enables us to develop maintenance routines to suit individual needs. Our size and national coverage bring economies of scale with consequent savings. You can be confident in our ability to deliver. We provide maintenance schedules, documentary evidence of visits and inspections together with 'Key Performance Indicator Reports' that track our performance.

We are committed to looking after your external environment. We act as your eyes and ears, identifying areas that put your customer or staff at risk, i.e. loose paving, hidden street lights. Our digital dilapidation reports help you make informed decisions. They put a value on keeping your estate in good order.

**Landscape Design can provide a professional tailored maintenance solution for all elements of your landscaping needs. To receive more information and a detailed quotation please call David on 01506 639950.**
