

Paving Restoration Solutions

Are you fed up with the state of your driveway or patio but don't want the expense of replacing it? For the fraction of the cost of replacing your paving Landscape Design Contracts could restore it and have it looking as good as new and stay that way for years to come.

We can professionally restore your path patio or driveway regardless of what it is constructed with. We have a comprehensive knowledge of block paving, patterned imprinted concrete, tarmac, natural paving and decking.

We provide the following services:-

- Sympathetic and sensitive cleaning service, restoring more fragile surfaces where aggressive cleaning methods would either be not suitable or inappropriate
- Repair and restore sinkage, spreading and cracking
- Graffiti, paint and water stain removal
- Tinting, colouring and re-surfacing

Using specifically designed surface cleaning machines and without the need for any harmful chemical treatments any surface can be repaired, restored and preserved. We thoroughly clean the surfaces and then conduct any remedial repairs. Once dry, all joints are re-instated using either sand, cementitious pointing mortars or rapid setting grouts. Once the joints are fully stabilised and with the surface area spotlessly clean we apply a specially formulated liquid sealer, the sealer is applied using a high compression machine that atomises the liquid and forces it into the paving and joints. The sealer has some unique properties which allow it to bind joints and paving materials together forming a flexible bond. The sealer provides an aesthetically pleasing durable finish which will prevent water ingress and substrate frost damage, it will also inhibit weed and moss growth. Where necessary we can also re-tint paving where the colour has been destroyed by excessive pressure washing.
