

Commercial Turfing Solutions

Landscape Design Contracts are CSCS (Construction Skills Certification Scheme) registered, CHAS Accredited and approved by Construction line under the National Pre-Qualification Service for Landscape sports facilities, playgrounds and sports grounds (grass) and sports ground (grass) term contracts. LDC have installed quality turf in factory sites, industrial units, hospitals, prisons, schools, airports, property developments, public spaces, parks and cemeteries.

On commercial sites, we are often faced with poor quality soil, compaction caused during construction, and stone or debris contamination. Whether preparing an area for grass seeding or for turf laying, we have developed a series of operations to overcome these problems and achieve optimum preparation. Our compact tractor and stone-burying cultivator makes light work of such situations. The machine grades and levels the soil to create a level stone-free seed bed even in the harshest of operating conditions.

Turf Laying provides immediate completion to a site and can be in use within two to three weeks depending on the time of year. All that is needed following completion is the necessary watering and aftercare; turf laying provides the ideal solution when time is short and an instant result is required.

We lay more turf per annum than any other contractor in Scotland!

- Seeded areas typically need from six to nine weeks to establish ready for first cut. Seeding an area allows us to specifically select the most suitable grass mixture for that site. High seeding rates and our expertise in soil preparation ensure that establishment is as quick and even as possible. Significant cost savings can be made by seeding an area, and in the long term the quality of the grassed area is not compromised.

We welcome enquiries from local builders and developers, Civil Engineering companies, Local Authorities and village associations across the country. Client references, Health & Safety Policy, Environmental policy, site specific method statements and risk assessments are available upon request. For all our customers LDC provide full aftercare information, follow-up visits, and also undertake professional maintenance work if requested.

We offer clients comprehensive services and specialist equipment for sports pitch construction, sports surface construction, renovation and aftercare management. Our services include full preparation, implementation and aftercare management for grass seeding and turf laying on all natural sports surfaces.

Landscape Design can provide a professional tailored maintenance solution for all elements of your landscaping needs. To receive more information and a detailed quotation please call David on 01506 639950.
