

Residential Maintenance Solutions

We can keep your paving looking at its very best all year round, no weeds, moss or algae GUARANTEED!

Once the installation or restoration of your paving is complete it will look beautiful, however it will only remain in that condition if it is maintained regularly and professionally. Regardless of how well your paving has been laid or what it is constructed from it is still exposed to the elements and as such will be affected by all or some of the following; atmospheric pollution, bird droppings, tree saps, grass clippings, grit oil or mud from your car, etc. etc.

Since 1986 we have been developing our maintenance programme working with different machines and chemicals, trialling and testing new products culminating to what we have today which is a unique and affordable service utilising the very latest state of the art hybrid chemicals and machinery. These chemicals are high performance anti-viral, anti-bacterial containing disinfectants effective against all forms of moss, algae and fungi. They are a foliar acting herbicide which will control the growth of both annual and perennial grasses. Additionally we apply a Cationic detergent which will help keep the surfaces clean.

What does this mean to you? Four visits per annum, one machine clean followed by three chemical applications ensuring your paving looks at its best 365 days of the year so that you can enjoy it without the hassle! Our maintenance programme can be paid monthly offering a low cost solution to year round beautiful paving

The two pictures (right) show two driveways constructed at exactly the same time using identical block paviours. We have been maintaining one of them you decide which one!
